Narcissus or Daffodils

Among the early spring flowers these are in the front rank of popularity. Appearing just after winter, they animate our gardens with masses of gold and silver, while their fragrant blossoms in the home are invaluable for decorative purposes.

CULTURE OUT-OF-DOORS. All varieties of Narcissus should be grown in clumps and patches in every suitable spot, and there is not a spot where grass will grow in which Narcissus will not succeed. In planting be guided by the size of the bulb, allowing 4 to 5 inches between small sorts and 6 to 8 inches between large varieties. The bulbs will soon completely fill the space, forming a compact mass, and it is then their flowers are produced the most freely. Plant about 5 inches deep, according to the size of the bulb.

Hyacinths

One of the Earliest Spring Flowers

CULTURE IN POTS. Use any good soil, mixed with sand, potting so as to leave the top of the bulb even with the soil. For a single plant use 4 or 5-inch pot, but the effect will be prettier if several bulbs are planted in a larger pot, and still more effective if all are of one color. Press the soil firmly around the bulbs, but do not pack it underneath. Sink the pot in the earth about 6 inches, covering with soil, choosing a location that is not too wet. For a succession of blooms, bring the first out about December 1st, and every two weeks thereafter, until February 1st. Keep moderately warm and when they begin to bloom, give plenty of water and as much fresh air as possible. Too much heat dries up the flower and shortens the blooming period.

CULTURE IN OPEN GROUND. Any good garden soil will suit. If clay or very heavy, do not cover more than 3 inches; if light, from 4 to 6 inches. Protect with manure, leaves or coarse litter to prevent freezing.

MARCONI. Bright deep rose, faintly shedded rosy white, producing a large broad spike, borne on a stiff stem; particularly good for bedding.

OSTARA. Pure blue all over, lightly tinted violet inside; easy and excellent Christmas forcer; good spike.
